WHAT IS IT?

The alarm clock that plays MP3s as it rolls away.

Stats show that 40% of people 'abuse' the snooze. Typical alarm clocks just don't work very well. Ours never lets you oversleep again. If you snooze, Tocky will jump off of your nightsand, and run around, determined to get you out of bed. Tocky's outfitted with a built-in microphone so that you can record personal wake-up messages. In addition, Tocky can upload MP3s. Wake up to your favorite tracks rolling around your room! Patent Pending
